
THE REASONING THESIS

Governed Logic

The reasoning thesis

*Truth governs logic.
Logic governs reasoning.*

Standalone working draft 0.1

Prepared 22 September 2026 · 05:28 PM EDT

Source: Treatise v0.4 · Alpha and Omega draft 0.1

Drawn from the existing drafts, with connective passages reflecting the author's stated hierarchy.

Follow the chain.

I. The reasoning thesis

On the Nature of Ultimate Grounding investigates what ultimately grounds being, truth, logic, meaning, intelligibility, and obligation. Governed Logic is the downstream reasoning thesis that follows when reasoning is required to remain answerable to truth and ultimately to its ground.

The simplest operational statement is:

Truth must govern logic.

Logic must govern reasoning.

Logic alone cannot determine truth. A valid argument can proceed from false premises. Truth therefore governs the admissibility of the premises and the correspondence of the conclusion to reality. Logic governs the relations of inference. Reasoning that abandons logic ceases to distinguish valid from invalid inference; logic detached from truth can become a perfectly valid route from false premises to false conclusions.

II. Principles and governing referent

The current Governed Logic nucleus makes six first principles explicit:

Truth is binary and non-negotiable, grounded in Jesus Christ the Logos.

Logic is binding.

Being is real.

Meaning is real.

Intelligibility is real.

Obligation is real and binding.

The governing referent is Jesus Christ, the Logos.

The correspondence between these six first principles and the six domains of On the Nature of Ultimate Grounding is structurally significant, but it does not substitute for the argument of the treatise. The treatise asks what grounds these realities and follows each chain toward ultimacy; Governed Logic states them explicitly as first principles within a reasoning architecture governed by the named referent.

These principles are not a list of behavioral prohibitions. They specify the structure under which reasoning operates.

III. The governing structure

Truth governs logic.

Logic governs reasoning.

Reasoning is answerable back through logic to truth and ultimately to ground.

Intelligence is downstream.

This is why the central problem of artificial intelligence begins before intelligence.

IV. Alpha and Omega within Governed Logic

Alpha and Omega reasoning is the bidirectional structure within Governed Logic. Generatively, reasoning proceeds from ground through truth and logic. Adjudicatively, reasoning is tested back through logic and truth toward ground. The companion Alpha and Omega Reasoning develops that structure in full.

Ground → Truth → Logic → Reasoning.

Reasoning → Logic → Truth → Ground.

V. Intelligence is downstream

A system can become more capable without becoming better grounded. It can generate more fluent arguments, synthesize more information, perform longer inference chains, and imitate increasingly sophisticated human discourse while still lacking a stable governing referent for adjudicating the frameworks from which those outputs are produced.

Govern the logic, and you govern what intelligence is built upon.

But logic itself must be governed by truth.

And truth must be grounded.

Ground → Truth → Logic → Reasoning → Intelligence.

VI. The relationship between the works

This boundary matters. The treatise is not to be compressed mechanically into a prompt. The reasoning engine is not to be inflated into a complete metaphysics.

On the Nature of Ultimate Grounding examines the ultimate ground itself. Governed Logic develops the reasoning thesis that follows. Alpha and Omega Reasoning explains the bidirectional structure within Governed Logic. Governed Intelligence addresses the downstream AI instantiation.
